

Richwood Skirt Clamps

and Rock Flex® Skirt Rubber

Richwood Skirt Clamps are built using steel plate, contoured steel castings and a heavy duty stainless steel clamp assembly that provides years of trouble free service.

The stainless steel clamping mechanism means continued ease of use even in tough applications.

Skirting changes are quick and easy with Richwood Skirt Clamps. They are easy to install and adjust. There is no need to notch, slot or punch the skirt rubber. Just lift the stainless steel clamping handle, install the skirt rubber and clamp the handle down.

Skirt Clamps are available in up to 48" lengths in high or low profile.

For material containment, sealed conveyors and spill free load zones, rely on Richwood Skirt Clamps for simplicity and durability.

Rock Flex® Skirting Rubber

- *Specially formulated with SLK blend rubber for extreme low friction*
- *Seals conveyed material*
- *Flexible, will not damage the belt*
- *Factory beveled edge available*
- *Modular design fits new or existing load zones*
